1980

TABLE OF CONTENTS

Foreword vii

Chapter 1

Introduction. Survey of basic results 1

Appendix 1. Additional information on compact operators 13

Chapter 2

Approximation theorems. Entropy 21

Appendix 2. Proof of Theorems 1.4 and 1.7 36

Appendix 3. Proof of inequality (2.27) 43

Commentary and references to the literature 44

Chapter 3

Singular numbers of integral operators. Multipliers 47

Appendix 4. Nuclearity of integral operators 63

Appendix 5. Estimates of the singular numbers of integral operators that are not in the class $\mathfrak{S}_2$. Operators with weakly polar kernels 66

Commentary and references to the literature 71

Chapter 4

Asymptotic behavior of the spectrum of polyharmonic operators in weighted spaces 75

Appendix 6. Problems with a small parameter. Weights with strong singularities 91

Appendix 7. Asymptotics of the spectrum of weakly polar integral operators 95

Commentary and references to the literature 100

Chapter 5

Asymptotics of the spectra of elliptic variational problems with nonsmooth coefficients 103

Appendix 8. Spectral asymptotics of elliptic operators with a strong degeneracy 118

Commentary and references to the literature 122

Bibliography 125
